

PEST CONTROL AND CLEANING SERVICES

What is Pesco?

Pesco is an ERP solution developed by Zesty Labs exclusively for companies that provide cleaning & pest control services. Pesco is powered by Odoo (formerly OpenERP), the most popular open source ERP vendor with around 2 million users worldwide. In order to streamline your business processes and ensure efficient management, Pesco has a wide range of modules which are tailored exclusively based on the client's requirement, with functionalities such as preparing service contracts, scheduling tasks based on those service contracts, pest control treatment types, information of chemical usage and timesheet planning for the pest control & cleaning field workers. Pesco can be used as a comprehensive ERP system such that the business managers can get a complete bird's eye view of the business from a single source.

Why Pesco?

In this competitive environment, management of data and information is a key aspect in a company's success. In a company that provides pest control & cleaning services, some of the challenges they may face include in service areas such as tracking the time of the personnel who are engaged in a pest control or cleaning field work, maintaining different contracts for their services, tracking chemical usage in their service visits and manually preparing reports for internal use.

This is where Pesco comes in place, as it is a complete IT solution that provides a complete view of the company on your computer screen. With Pesco, you can track the several contracts your company has for cleaning & pest control services, schedule tasks and update employee timesheets in them; which can be used for comparing actual and budgeted hours of operations which will be very helpful in analyzing the profitability of a particular contract.

The users can also track the type of jobs they may have - whether it is a call based job or a contract based job. Call based jobs will have its own independent task and each task will be invoiced individually, whereas a contract based job will be invoiced after the completion of the contract. Also in the tasks list, you can also provide information about certain factors such as treatment type during that particular visit, issues that have been noted during that visit, measures taken and recommendations from the technicians for the particular issue and whether it has been resolved in the mentioned period of time.
